

EXPERIENCE

Senior Frontend Engineer

Nov 2021 — Present

Credera

Houston, TX

- Served as a Frontend Engineer for a Tech Consulting firm working on 7 different client projects. Delivered production-grade web applications used by thousands of end users while partnering directly with stakeholders to translate business requirements into scalable technical solutions.
- Architected and led front end development for a GenAI Content Authoring Platform using React, Ant Design, and CKEditor, integrating LLM-powered content generation, real-time collaboration, and embedded document previewing. The app significantly reduced manual drafting time and improved cross-team productivity.
- Served as the front-end technical lead for an oil and gas portfolio intelligence platform that visualized thousands of wells via interactive geospatial mapping and advanced analytics dashboards. Integrated AI-driven decline curve analysis to model production trends and forecast asset performance, empowering leadership teams to optimize capital allocation and operational strategy.
- Led the modernization of a legacy insurance shopping platform by migrating the frontend from .NET to Angular, simplifying complex proposal workflows, improving maintainability, and delivering a faster, more intuitive user experience while maintaining backward compatibility.
- Contributed to business development efforts by producing technical scope estimates, evaluating vendor tools, and supporting SOW creation, which directly influenced successful client proposals and engagement expansion. .

Software Engineering Intern

June 2021 — Aug 2021

CAN Behavioral Health

Houston, TX

- Designed and developed a web application enabling healthcare providers to manage patient records, surveys, and treatment workflows in a centralized platform.
- Migrated legacy Excel-based workflows into structured Django data models, improving data integrity, enabling faster queries, and laying the foundation for scalable patient data management.
- Standardized the frontend using Material UI and reusable React components, improving design consistency and reducing implementation time for new features.

PROJECTS

AI Debate App

React, TypeScript, Django, AWS

- Designed and built a real-time AI-powered debate platform allowing users to create live debates and engage with AI opponents featuring distinct, persona-driven response styles.
- Implemented WebSocket-based bidirectional communication to support low-latency, real-time debate interactions and dynamic message streaming.
- Developed backend services in Django to manage debate sessions, persona configuration, and conversation state, integrating LLM APIs for context-aware responses.
- Deployed the application on AWS with scalable infrastructure to support concurrent real-time users.

AI Chatbot

React, NextJS, MySQL, Langchain, AWS

- Developed an AI-powered chatbot that translates natural language queries into SQL to retrieve structured data from a movie database.
- Designed database schema and implemented dynamic query generation, returning both results and executed SQL queries for transparency.

Gift Finder

React.js/Gatsby, Contentful, GraphQL

- Affiliate marketing Progressive web app that allows users to search for gifts to purchase and offers a small kickback from an affiliate link
- The app is built with Gatsby on the front end and integrated with Contentful CMS to allow for adding new products through a Web Interface

EDUCATION

Bachelor's in Computer Science, University of Houston

Aug 2017 — May 2021

TECHNICAL SKILLS

Languages

TypeScript, JavaScript, Python, C++, HTML/CSS

Frameworks

React, Angular, Django, ExpressJS, NodeJS, NextJS, Storybook. Gatsby, Langchain

Database

MySQL, SQLite, MongoDB, Planetscale

Software

Git, Github, AWS, Jenkins, Figma, JIRA, Docker, Contentful CMS, Github Copilot

Other

Test Driven Development, CI/CD, Agile Development, REST, SEO, Okta, OAuth, Mapbox, UI/UX
